

PREFACE

This report presents information about homemakers' preferences, usages, and buying practices for selected potato, rice, and wheat products. It is one of a group of studies conducted by the Special Surveys Branch, Standards and Research Division, Statistical Reporting Service, to determine consumer reactions to agricultural products. This study was designed to provide insights into measures which might be taken by potato, rice, and wheat producers to market their commodities more effectively and to provide consumers with an opportunity to express their opinions.

This report is based on data collected in 1966, and represents information not elsewhere available about consumer attitudes toward potato, rice and wheat products.

At the time the survey was conducted, there was a significant trend toward use of convenience foods. These foods include partially prepared and completely prepared potatoes; precooked and prepared rice; and wheat items prepared from a mix or purchased completely prepared. This trend has continued and is even more significant today in the marketing of these products.

The patterns of present day attitudes prevailing toward convenience foods compared with traditional forms are believed to be essentially the same as they were when the survey was conducted. They are particularly important in weighing consumer choices among farm products in the many forms in which they actually appear in the marketplace. The impact of these opinions is all the more significant given the high degree of substitutability of these items in household menus.

The study was under the general direction of Margaret Weidenhamer, Chief, Special Surveys Branch. Edward J. McGrath assisted in developing plans for it. Other services in the Department of Agriculture provided advice in the planning stage. Chilton Research Service, Philadelphia, Pa., under contract with the U.S. Department of Agriculture, designed the sample, developed the questionnaire, collected the data, and prepared a draft report. These phases of the study were supervised by Raymond O. Nelson and Stephen J. Friedman, Jr., Chilton Research Services.

The questions asked respondents were numbered beginning with one for each of the three product groups--potatoes, rice, and wheat. Therefore, the first initial of each product (P for potatoes, R for rice, and W for wheat) has been added to the page numbers in the three table sections of the appendix, to permit easier identification of the tables.

HIGHLIGHTS

White Potatoes

In this nationwide study, almost all homemakers said they had served white potatoes in some form during the month preceding the interview. Two-thirds had served fresh white potatoes exclusively; about one-third, both fresh and processed; and only 1 percent, processed exclusively. The proportion of homemakers who had served both fresh and processed was higher among the more frequent users of potatoes than among those who had served potatoes less often.

Most homemakers reported serving fresh white potatoes about as often at time of interview as they had 2 years previously. Dieting, coupled with the general feeling that fresh white potatoes are fattening, is one of the reasons mentioned most frequently by homemakers who indicated decreased serving, served one time or less in an average week, or not serving them within the preceding month.

Mashed potatoes were considered second to french fried as the most fattening way to prepare fresh white potatoes. Nevertheless, potatoes were served mashed by more of the homemakers than any of the other selected ways. In addition, the majority of homemakers thought fresh white potatoes were good-tasting, a necessary food, and high in food value.

Processed white potato products had been used by a majority of homemakers in the year prior to the interview. In general, homemakers felt that the cost of the processed white potato products they had bought was higher per serving than if they had prepared them.

Homemakers generally felt that processed white potato products were not as flavorful as fresh white potatoes. However, many respondents said they used them because they were easier or quicker to prepare than fresh white potatoes.

Rice

More than half the homemakers said they had used regular, uncooked rice but less than half had served precooked rice in the year preceding the interview. However, unlike white potatoes and white bread, which had been served by almost all homemakers, rice had not been served in any form by slightly more than 1 in 10. One of the more frequent reasons mentioned for not serving any rice, for not using regular, uncooked rice more often, and for a decrease in frequency of serving precooked or prepared rice in the previous 2 years was that family members did not like it.

Although a majority of homemakers said they were currently using about the same amount of rice as 2 years prior to the interview, the percentage who were using more rice was greater than the percentage who were using less. Increased use of rice may be attributable to additional serving of processed rice products since higher proportions of homemakers reported serving prepared or precooked rice more frequently, compared with 2 years previously, than reported expanded serving of regular, uncooked rice.

A majority of homemakers were still using most often the same kind of rice they had used 2 years before. More of the homemakers who indicated a change said they had switched to instant rice because it was quicker and easier to prepare.

Convenience seemed to be of more interest to homemakers than cost. Most homemakers reported they felt precooked rice or prepared rice products were more expensive than regular, uncooked rice or dishes prepared from regular, uncooked rice plus additional ingredients.

More of the homemakers who indicated a preference for grain length chose the long grain because they felt that it doesn't stick and it looks nicer than the short or medium grain.

Generally, homemakers considered rice to be fattening but high in food value and low in cost per serving. They did not consider rice to be as fattening as potatoes, bread, or macaroni products.

Wild rice and brown rice had been used by comparatively small percentages of homemakers. Wild rice users said it was used infrequently, primarily for special occasions or with special dishes.

Wheat Products

Bread; and Rolls, Biscuits, and Muffins

Practically all homemakers reported serving white bread within the previous year. Use of purchased rolls, biscuits, and muffins was considerably less as only about 8 in 10 homemakers indicated use during this time period.

Bread as well as rolls, biscuits, and muffins, were being served by the majority of homemakers about as often and in the same amounts at the time of interview as 2 years previously. A larger number of homemakers indicated using more bread currently than indicated using less. About the same number were serving it more often as were serving it less often. In the case of rolls, biscuits, and muffins, more homemakers reported serving a smaller amount and serving them less often than mentioned an increase for amount and frequency. The reasons mentioned most frequently for serving any of these products less often or in lesser amounts were weight consciousness and a decrease in the size of the family.

White bread was served by more of the homemakers for breakfast. Rolls, biscuits, and muffins were served by proportionately more of the homemakers for dinner.

Generally, homemakers felt white bread was high in food value. Although a majority thought bread was fattening, a higher percentage felt it was a necessary food. Opinions were more divided, though generally favorable, on whether the cost per serving was expensive or inexpensive and whether white bread was a dull or exciting food.

Freshness was reported to be the most important quality in selecting a loaf of white bread. Softness and flavor were other qualities the majority of homemakers considered important.

Homemakers were aware that something was added to the flour if "enriched" was printed on the bread wrapper. But their knowledge of the nutrients used

for enrichment of bread was extremely vague.

Only one-third of the homemakers said they had ever used frozen bread dough. More than half of those who had used it liked the taste and flavor of bread made from frozen bread dough. The main complaint given was about poor baking results, such as: The crust is hard, breaks, or peels off. Almost two-thirds of those homemakers who had used frozen bread dough preferred ready made bread, mainly because of convenience.

Other Wheat Products

A majority of homemakers reported serving macaroni products (spaghetti, macaroni, and egg noodles) during the year preceding the interview. Spaghetti had been served more than macaroni or egg noodles during the preceding week. All these products, particularly spaghetti, were served more as a main dish than as a side dish. The majority of homemakers said macaroni products were inexpensive per serving but fattening.

Eight homemakers in 10 had used some kind of flour for baking during the year preceding the interview. About three-fourths of the homemakers had used plain or cake flour for baking. Only one-fourth reported using self-rising flour.

Home-prepared or frozen pancakes and waffles were used as follows: More than 8 in 10 homemakers had served pancakes, and less than 5 in 10 had served waffles. Half the homemakers who had never served waffles said they did not have a waffle iron.

During the year preceding the interview, cake mix had been used by more homemakers than pancake and waffle, biscuit, or piecrust mixes. But homemakers used pancake and waffle mix more often proportionately than the other mixes in an average month.

Homemakers who had served cakes, cookies, pastries, or pies in the prior month--excluding respondents who had prepared these products only from mixes--said proportionately more pies were made "from scratch" than were purchased. Very few pies were made from a mix. Proportionately more pastries and cookies were purchased than were made from homemakers' own batter. Very few were made from mixes. In contrast, purchasing cakes, making them from homemakers' own batter, or making them from a mix were all mentioned frequently.

HOMEMAKERS' PREFERENCES AND BUYING PRACTICES FOR SELECTED
POTATO, RICE, AND WHEAT PRODUCTS

By
Evelyn F. Kaitz

INTRODUCTION

This report presents results of a study designed to obtain information on opinions about selected potato, rice, and wheat products. Data were collected to ascertain household consumers' preferences and buying practices for these commodities, including specialty or highly processed convenience-type food products; to identify the characteristics which consumers consider important in selecting such food products; and to determine their satisfaction with those items that were available at the time of interviewing.

The findings are based on personal interviews with 3,137 homemakers during January and February 1966. These homemakers represented a cross-section of private households in both rural and urban areas throughout the United States, excluding Alaska and Hawaii. Respondents were selected entirely by area probability sampling procedures. For this study, a homemaker is defined as the person chiefly responsible for buying, preparing, and serving food for the household.

A long questionnaire form (seven to 16 pages) and a short one (one or two pages) were designed for each product--potato, rice, and wheat. Our specifications for the areas of inquiry were extensive for each commodity. Thus, a combination of two long and one short questionnaire forms representing all three products was used in every household. The combination used for each respondent was rotated so that there was an equal opportunity for each long commodity form to be used first. The short form was completed last in each household. The questions on the short form for each commodity were primarily about incidence and frequency of use. Also included were some scale ratings of homemakers' opinions about the product. All questions on the short forms were included on the long forms. Findings for each question appearing on both forms were combined in this report. Questions appearing on both forms are marked with asterisks on the questionnaires shown for each commodity in the appendix.

Findings by demographic cross-breaks are discussed only when they are pertinent, such as results indicating large differences. More comprehensive coverage may be found in the appendix tables. Findings by these background characteristics are solely descriptive in nature. The reader is cautioned against assigning any cause-and-effect relationship from these results. Personal characteristics such as age, education, and income levels, which are highly interrelated, are shown separately. To combine them would have resulted in an excessive number of separate groups with too few respondents in each. Findings involving other characteristics, such as region and community size, may reflect differences arising from properties of these characteristics (such as climate or population density); or they may reflect differences that are related to the personal characteristics of residents. Responses to a few questions have not been included because the data were not of value or did not

contribute to an understanding of homemakers' opinions about the subject areas covered in this study.

As in all surveys in which a sample is interviewed rather than the total population, the findings are subject to sampling errors. The sample design, sampling method, and sampling tolerances are described in the appendix. The data are also subject to errors of response. For example, when homemakers report using a product a certain number of times during the week or a year, they are describing what they consider to be their general practice. Since the focus of this study is attitudinal, no attempt was made to verify the respondents' claims about either the frequency or the amounts used. Data from the questions on usage of these products are therefore subject to errors stemming from respondent interpretation and memory bias, and cannot be interpreted as factual information. Data on frequency of use do not indicate the amounts of these products consumed. Information about consumption of these commodities may be found in the results of the 1965 household food consumption study conducted by USDA. 1/

To categorize households as light, medium, or heavy users of each product, we classified reported users of potatoes and rice according to the number of times the homemakers said they had served these products in a specified time period. For wheat, the classification was dependent upon the reported amount of bread used. The classifications--light, medium, and heavy users--are defined for each commodity in the text for that commodity. Throughout the report, we use "light" interchangeably with "low" and "high" with "heavy" when discussing usage levels for each commodity.

The regional classification corresponds to that of the Bureau of the Census with the exception that Maryland, Delaware, and the District of Columbia Standard Metropolitan Statistical Area were grouped with the Northeast rather than the South:

<u>Northeast</u>	<u>North Central</u>	<u>South</u>	<u>West</u>
Maine	Ohio	North Carolina	Montana
New Hampshire	Michigan	South Carolina	Arizona
Vermont	Indiana	Virginia	Colorado
Massachusetts	Illinois	Georgia	Idaho
Rhode Island	Wisconsin	Florida	Wyoming
Connecticut	Minnesota	West Virginia	Utah
New York	Iowa	Arkansas	Nevada
New Jersey	Missouri	Louisiana	New Mexico
Pennsylvania	North Dakota	Oklahoma	California
Delaware	South Dakota	Texas	Oregon
Maryland	Nebraska	Kentucky	Washington
District of Columbia <u>2/</u>	Kansas	Tennessee	
		Alabama	
		Mississippi	

ion of Households in the United States, Spring 1965. U.S. Department of Cultural Research Service, Household Food Consumption
-10. (Other reports in this series are forthcoming)

the Washington, D. C., Standard Metropolitan

Areas were classified by community size as follows: Metropolitan--Standard Metropolitan Statistical Areas (SMSA's) of more than 1 million population; Urban--SMSA's of less than 1 million population plus all other urban territory as defined for Census purposes; and Rural--territory defined as rural for Census purposes other than rural territory included in SMSA's.

Respondents were asked to indicate total annual family income. Households were then classified in approximately equal-sized groups as follows: Lower--less than \$4,000; Middle--\$4,000 to \$6,999; and Upper \$7,000 and over.

Level of education was grouped as follows: Grammar school--grades 1 to 8; High school--some or completed; and College--some or completed.

Homemakers were also classified according to age, family size, employment status, and usage level of the survey products.

In many of the tabulations, percentages may add to more than 100 (or more than the group totals shown) because some respondents gave more than one reply. The "miscellaneous" categories of information, shown throughout the tabulations, are the merging of all the ideas or items which individually were mentioned by less than 2 percent of the respondents in reply to a particular question.

WHITE POTATOES

Use in Any Form

Most respondents (96 percent) had served white potatoes either fresh or processed in the month preceding the interview. About half had served them 16 or more times in the past month. (Question 1 in the potato section) 3/

The respondents who had served white potatoes were asked specifically about their use of fresh and processed white potatoes (excluding potato chips). Two-thirds (67 percent) had served fresh white potatoes exclusively during the month prior to the interview. Almost one-third (32 percent) answered both fresh and processed, and only 1 percent said processed exclusively. The proportion of homemakers who had served both fresh and processed potatoes was higher among the more frequent users of potatoes than among those who had served potatoes less often. (Summary of question 2)

Serving Bread Products With Potatoes

The majority of respondents (73 percent) who had ever served white potatoes in any form usually served bread or rolls at meals when they served potatoes. The most frequent reason given by those homemakers who did not was: Too much starch if both are served. (Question 38 and Question 39)

3/ The references in parentheses are to the numbered questions in the questionnaires and to the tables which summarize the answers. Both the tables and the questionnaires may be found in the appendix following the description of the sample. (Not all questions are shown in tabular form.)

Fresh White Potatoes

Virtually all homemakers (99 percent) had served fresh white potatoes during the preceding year. The leading reason mentioned by about half the respondents was that the family likes fresh white potatoes. About 2 in 10 homemakers gave each of these other reasons: They are a nutritious food, don't like or buy processed potatoes, potatoes round out a meal, and like the taste. (Question 11)

To classify the level of fresh white potato use, we asked respondents the number of times they served them in an average week. Their responses on frequency of use in an average week were grouped as follows:

<u>Usage level</u>	<u>Number of times served in an average week</u>	<u>Percent ^{1/}</u>
Light users	2 or less	35
Medium users	3 - 5	39
Heavy users	6 or more	25

^{1/} One percent of the respondents had not served fresh white potatoes in the year prior to the interview.

A higher proportion of respondents who were from the Southern region, reported a lower annual family income, were age 50 or over, or were in one- or two-member families said they were light users. (Summary of questions 4a, 6, 6a, 7, 8, and 9)

Homemakers who had served fresh white potatoes one time or less in an average week gave as their main reasons for not serving them more often: Watching weight, don't like potatoes that much, and serve other foods instead such as rice. (Question 10)

Similar answers were given by the small number of homemakers who had served fresh white potatoes but not within the preceding month. Their most frequent reasons for not serving them within this period of time was also that they were dieting. (Tabulation not shown)

Homemakers were asked to compare their frequency of serving fresh white potatoes at the time of the interview and 2 years before. Around 7 in 10 currently served fresh white potatoes about as often as they had 2 years earlier. Almost 2 in 10 were serving them less often, and the remainder were serving them more often. (Question 12)

Homemakers who served fresh white potatoes less often than 2 years before mentioned reasons such as the household is smaller, and being on a diet. Homemakers who responded "more often" said their families were larger and older, they cook more now, or their eating habits had changed. (Question 13)

Purchase Patterns

Almost half (45 percent) the homemakers who had served fresh white potatoes in the preceding year usually purchased between 6 and 10 pounds at one time; about one-quarter (26 percent) said 5 pounds at a time. Comparatively small percentages of the homemakers usually purchased over 10 or less than 5 pounds at a time; and some (3 percent) said they grew their own potatoes. (Question 14)

Frequency of purchase was as follows:

<u>Frequency of potato purchases</u>	<u>Percent</u>
Once a week or more	25
Two or three times a month	42
Once a month	20
Less often than once a month	13

(Tabulation not shown)

When homemakers were asked whether they were usually able to find the kind of fresh white potatoes they wanted in season, the vast majority replied they had no difficulty. Only 4 percent said they could not usually find the kind they wanted--baking or Idaho were mentioned most frequently. (Tabulations not shown)

All three types of potatoes--new, old, and baking (as defined by the respondents)--had each been purchased by more than half the respondents who had bought any fresh white potatoes during the year before the interview. (Questions 19 and 20)

Reasons for Preferring Old, New, or Baking Potatoes

Homemakers who reported buying more than one kind of potatoes in the preceding year were asked which type they liked best. Homemakers who had bought only one kind were assumed to prefer that kind and it was recorded as the kind they liked best. Although old potatoes were preferred by more of the homemakers in these two groups (4 in 10), baking and new potatoes were each preferred by about 3 in 10. Proportionately more of the respondents from the Southern region, those in the lower income group, and those with only a grammar school education indicated a preference for old potatoes. More of the respondents from the upper income group and those with college education preferred baking potatoes. (Question 21)

Homemakers who preferred old potatoes did so, for the most part, because they believed they can be cooked or prepared in many ways; are less expensive; have desirable physical properties after cooking; and have more flavor or taste. The more frequent reasons given for preferring either new or baking potatoes were: Desirable physical properties after cooking and better flavor. (Question 23)

Serving Patterns

Mashed potatoes appeared to be the most popular way of serving fresh white potatoes in the prior year. The vast majority of homemakers (92 percent) indicated serving them this way. Other ways mentioned frequently included: baked (82 percent), boiled (79 percent), potato salad (74 percent), french fried (62 percent), and home fried (60 percent).

In general, the ways that fresh white potatoes were served during the previous month paralleled the ways they had been served in the previous year. Interviewing was conducted during January and February, which may account for

the sizable decrease in the number of respondents who served potato salad in the month prior to interviewing. (Questions 26 and 27)

Almost all of the homemakers said they served fresh white potatoes in all seasons. More than 7 in 10 (76 percent) maintained they serve them equally all year around. About 2 in 10 said they serve them most often in the winter, mainly because they "cook more" or "eat heavier meals then." Some respondents indicated increased use in the summer; "make potato salad" was mentioned most frequently as the reason. (Tabulations not shown)

Opinions of Selected Characteristics

All respondents, whether or not they used fresh white potatoes, were given a card listing specific qualities used to describe fresh white potatoes. A seven-point scale was used to indicate their opinions. Negative and positive qualities were not always indicated by the same numbers to avoid positional bias. For example, "low in food value" was 1 and "high in food value" was 7 whereas, "low cost per serving" was 1 and "high cost per serving" was 7 on the scale. The respondents were to report their opinion about fresh white potatoes by indicating the number that was closest to how they felt. About 8 in 10 homemakers thought fresh white potatoes were good tasting, rating them 6 or 7 on the scale. Although about 6 in 10 homemakers thought they were fattening about the same number of respondents felt they were a necessary food and were high in food value. Opinions were more divided, though generally favorable, on whether the cost per serving was high or low and whether fresh white potatoes were a dull or exciting food. Only about 1 in 10 homemakers considered them high in cost per serving (rating them 6 or 7) or a dull food (rating them 1 or 2). The following table presents the average numerical ratings for these qualities:

<u>1 on the scale</u>	<u>7 on the scale</u>	<u>Average rating</u> <u>Number</u>
Not good tasting	Good tasting	6.3
Low in food value	High in food value	5.7
Not fattening	Fattening	5.7
Unnecessary food	Necessary food	5.5
Dull food	Exciting food	4.9
Low cost per serving	High cost per serving	3.4

(Question 45)

Again using a seven-point scale, homemakers were asked to rate fresh white potatoes on flavor (1 meant "low in flavor" and 7 meant "high in flavor"). The results were consistent with those reported above: Over half the homemakers (58 percent) gave fresh white potatoes the highest rating possible (7), and the average numerical rating was 6.2. (Question 47)

Homemakers were also asked how fattening they considered fresh white potatoes to be when prepared in each of four ways, using their own recipe. A seven-point scale was used--1 meant "not at all fattening" and 7 meant "fattening." French fried potatoes were considered the most fattening by about 8 in 10 homemakers who rated them 6 or 7 on the scale (the average numerical rating was 6.2).

was 6.3). Mashed potatoes ranked as the second most fattening--about 7 in 10 rated mashed 6 or 7 on the scale (the average numerical rating was 5.9). About 6 in 10 respondents did not consider boiled potatoes fattening; neither did they consider them "not at all fattening"--3, 4, or 5 was the rating given by these homemakers. The same proportion rated baked potatoes the same way. (Question 46)

The cooking quality of fresh white potatoes was rated by most homemakers who had used them in the past year as good (64 percent) or excellent (27 percent). Homemakers who considered the cooking quality fair or poor (9 percent) did so essentially because: The potatoes sometimes have had spots, they get mushy, and they are nice outside but bad inside. (Tabulations not shown)

Substitutes for Potatoes

Homemakers who had ever served fresh white potatoes were asked what they would do and what they thought they could serve in place of potatoes if they had planned to serve potatoes and discovered they had none. Although about one-third of the respondents said they would make an effort to get potatoes in some way, virtually all of the homemakers (96 percent) named one or more foods they felt they could serve in place of potatoes--7 in 10 mentioned wheat products and almost as many cited rice. (Summary of questions 36 and 37)

Processed or Prepared White Potatoes

Use of Selected Potato Products

Over one-third of the homemakers (37 percent) said they had not purchased any of a selected group of processed white potato products in the preceding year. More than one-half (55 percent) had purchased none in the prior month. Frozen french fries had been bought by the most homemakers in the preceding year (46 percent) and in the past month (30 percent). Instant mashed was the only other specified type purchased by a sizable number (33 percent in the prior year and 17 percent in the prior month). (Questions 31 and 32)

Opinions About Cost Per Serving

Among homemakers who reported purchasing processed white potato products in the previous year, the majority generally felt the cost per serving of each specified processed product was higher than if prepared by them. A notable exception was potato sticks in a can--opinion was almost equally divided between homemakers who felt the cost was higher (36 percent) or lower (30 percent). (Question 33)

Effect of Processed Potatoes on Total Potato Usage

Among homemakers who had used some processed potatoes in the previous year (63 percent of total sample), only 1 in 10 (11 percent) said the use of processed potatoes had affected the total amount of potatoes used in their homes. Most of this small group indicated that more potatoes were used, because the processed forms were easier or quicker to prepare than fresh white potatoes. (Tabulations not shown)

Flavor Comparison of Fresh and Processed White Potatoes

All homemakers, whether or not they had used them, were asked their opinion about the flavor of fresh white, instant mashed, frozen french fried, and canned potatoes. The majority of homemakers rated fresh white potatoes very high in flavor; the average score was 6.2 on a seven-point scale. Homemakers considered the processed potatoes asked about as much less flavorful--the average numeric rating for frozen french fries was 4.2, instant mashed 3.1, and canned potatoes 2.5. (Question 47)

Potato Chips

Two-thirds of the homemakers said they had served potato chips in the month preceding the interview. Proportionately more homemakers under age 50, those with three or more family members, and those who reported middle and upper incomes had served potato chips in this time period. More homemakers had served potato chips as a snack (59 percent) than with meals (32 percent) or with dips (28 percent) during the prior month. (Summary of questions 40 and 41) Those who had served them more than one way were asked which way they served them most frequently. Homemakers who had served them only one way were recorded as serving them that way most frequently. Potato chips were served most frequently as a snack, followed by with meals, and with dips. (Question 42)

Half the homemakers who had served potato chips in the prior month reported that the color of the chips was not at all important to them. Those who considered the color very important or somewhat important did so primarily because they disliked the "overcooked" or "burnt" taste of dark or brown potato chips. (Question 43 and Question 44)

RICE

Use in Any Form

Most homemakers (87 percent) reported serving rice in some form in the month preceding the interview. (Summary of questions 1 and 5 in the rice section) The leading reasons given by homemakers for serving rice were: Family likes and it provides variety in meals. (Question 4) The reason given by most homemakers who had not served rice in any form during the previous year was that family members did not like it. (Question 2)

To classify the level of rice use, we asked respondents the number of times they served rice in any form in an average month. The responses were grouped as follows:

<u>Usage level</u>	<u>Number of times served in an average month</u>	<u>Percent ^{1/}</u>
Light users	2 or less	42
Medium users	3 - 5	24
Heavy users	6 or more	20

^{1/} Thirteen percent said they had not used rice in the year prior to the interview and 1 percent gave no answer.

More of the respondents from the North Central region, those in the higher income groups, those in smaller families, and those with more than a grammar school education were light users. (Summary of questions 7, 7a, and 7b)

Types Served

More respondents indicated serving regular, uncooked rice in the year and month preceding the interview than reported serving a specific type of precooked or prepared rice, as shown in the following tabulation:

	<u>Past year</u> - - - - <u>Percent</u>	<u>Past month</u> 1/- - - -
Served rice in some form	87	71
Regular, uncooked rice	61	48
Precooked rice	45	30
Instant	36	22
Parboiled or converted	16	10
Prepared rice	14	6
Spanish	11	4
Fried	4	2

1/ May add to more than 100 because of multiple answers.

(Summary of questions 1 and 5, and
Summary of question 6)

Type Preference

Homemakers who reported serving more than one type of rice in the preceding year were asked which type they liked best. Homemakers who had served only one type were assumed to prefer that type and it was recorded as the type they liked best. Regular, uncooked rice was the type liked best by more than half of the homemakers (57 percent), followed by instant rice (27 percent), and parboiled or converted rice (11 percent).

Preference for regular, uncooked rice was indicated by proportionately more homemakers who were from the Southern region, reported a lower income, were age 50 or older, had completed only grammar school, or indicated heavier rice usage. (Question 9)

Homemakers (including those who indicated serving only one type) gave reasons such as the following for their preference:

Regular, uncooked--habit, taste, fluffier, and cheaper

Instant--quicker to prepare, and easier to prepare

Parboiled--quicker to prepare, and taste (Question 10)

Comparing types of rice usually purchased most often 2 years earlier with types usually purchased most often at the time of interview, the majority of the respondents answered regular, uncooked for each time. However, there was

a slight increase in the percentages of homemakers who reported that at the time of interview they usually purchased processed rice and a small decrease for regular, uncooked rice. (Questions 28 and 29)

A separate comparison was made of each respondent's answers to the question about the type bought most often at the earlier time and at the time of interview. As shown below, most homemakers were still buying the same kind of rice most often;

Type of rice bought most often at time of interview <u>1/</u>	Type of rice bought most often 2 years earlier <u>1/</u>		
	<u>Regular</u>	<u>Parboiled/ converted</u>	<u>Instant</u>
	-----Percent-----		
Regular	89	1	6
Parboiled/converted	3	92	1
Instant	8	7	91
Total	100	100	98

1/ Excluded "prepared rice," "none," and "not ascertained."

Among homemakers who indicated buying a different type of rice at the time of interview from the type bought 2 years previously, most of the change was in the purchase of instant rice because it was thought to be quicker and easier to prepare. (Tabulation not shown)

Grain Length Preference

Of the three types of rice grains--short, medium, and long--homemakers who had served rice in the year prior to the interview preferred long grain (40 percent) over medium (11 percent) or short grain (7 percent). The balance (42 percent) was about evenly divided between those who had no preference or did not state a preference. (Question 24)

Reasons cited most often by homemakers who preferred long grain rice were: The long grains don't stick, and it looks nicer. (Question 25)

Serving Patterns

Although the majority of respondents (68 percent) who had served rice indicated no change, about 2 in 10 said they were using more rice at the time of the interview than 2 years before, and about 1 in 10 were using less. Additional current use of rice was reported more often as the number of family members increased and among the younger homemakers. (Question 3) Parallel responses were reported in answer to similar questions about regular, uncooked rice, a precooked or prepared rice products.

Homemakers who had served rice in the previous year were asked in which seasons they served rice. Each season was indicated by a majority of the re

spondents--winter (99 percent), fall (92 percent), spring (88 percent), and summer (86 percent). Among homemakers who served rice in more than one season (92 percent), 7 out of 10 maintained they served it equally often all year around. Among the remaining 3 in 10, practically all (27 percent) said they served rice most often in the winter, because they cook more in the winter or they prepared more recipes that are served with rice. (Tabulations not shown)

Regular, Uncooked Rice

About 6 in 10 homemakers said they had used regular, uncooked rice in the year prior to the interview. (Summary of questions 1 and 5) Among those respondents who had not used this type of rice in the previous year, more than half said they had not because regular, uncooked rice requires more time than other types to prepare. (Question 11)

Among the homemakers who had used regular, uncooked rice in the previous year, more than 4 in 10 (44 percent) said they used it two times or less in an average month. (Question 16) Only one reason for not using it more often--dislike for rice by family members--was mentioned by as many as 2 in 10 of these infrequent users of regular, uncooked rice. Length of time to prepare, preference for variety in meals, family preference for potatoes, and use of precooked rice mostly, were each given by around 1 in 10. (Question 17)

The majority of homemakers (72 percent) who had used regular, uncooked rice in the preceding year said they were currently using it about as often as they had 2 years earlier. The percentage of homemakers using regular, uncooked rice more frequently at the time of interview was only slightly higher than the percentage using it less frequently (15 percent versus 12 percent, respectively). (Question 18)

The most frequent reasons--given by around 3 in 10 homemakers--for using regular, uncooked rice more often at the time of interview were: Change in size or age of family, and family members like rice. Reasons such as increased use of another type of rice--mainly instant or precooked--change in size or age of family, and time involved in preparation were each given by about 2 in 10 homemakers who said they were currently using it less often. (Question 19)

Serving Patterns

About half the homemakers had used regular, uncooked rice in the past month. (Summary of question 6) Thirty-seven percent of these homemakers had used it one or two times; 35 percent, three to five times; and 28 percent, six or more times. Characteristics of homemakers who had used regular, uncooked rice only one or two times in the past month closely paralleled characteristics of lighter users of rice in any form. That is, a greater proportion were from the North Central region, were in the upper income group, had smaller families, or had more than a grammar school education. (Question 8)

Ways Served

Homemakers who had used regular, uncooked rice in the month preceding the interview were asked whether they had used it in a number of selected ways. If they had, they were then asked the way they used it most frequently. Homemakers who had used it only one way were recorded as using it that way most frequently. As shown in the table below, regular, uncooked rice was used more

often as a side dish to the main course of a meal or as the main dish than as dessert, in soup, or as cereal:

<u>Ways of serving regular, uncooked rice</u>	<u>Ways served in past month</u>	<u>Ways served most often in past month</u>
	<u>-----Percent-----</u>	
Side dish	55	37
Main dish	53	38
Dessert	38	11
Soup	35	6
Cereal	19	7

Proportionately fewer respondents from the Southern region reported using regular, uncooked rice as a dessert in the past month than respondents from the Northeast, North Central, or Western regions. As the age of the respondent increased, higher proportions indicated using regular, uncooked rice as a dessert or in soup, and lower proportions mentioned using it as a side dish. (Question 20 and Question 21)

Opinions of Specific Qualities

All respondents were given a card listing specific qualities used to describe regular, uncooked rice. A seven-point scale was used to indicate their opinions. Negative and positive qualities were not always indicated by the same numbers to avoid positional bias. For example, "low in food value" was 1 and "high in food value" was 7; whereas, "low cost per serving" was 1 and "high cost per serving" was 7 on the scale. The respondents were to report their opinion about regular, uncooked rice by indicating the number that was closest to how they felt. In general, the homemakers felt that regular, uncooked rice was fattening but high in food value and low in cost per serving. About 5 in 10 considered it high in food value and about 4 in 10 considered it fattening (rating it 6 or 7 on the scale for both qualities). About 6 in 10 thought it had a low cost per serving (rating it 1 or 2 on the scale). Opinions were more divided on whether regular, uncooked rice was a dull or exciting food and whether it was unnecessary or necessary food; about 3 in 10 homemakers felt it was an exciting and necessary food (rating it 6 or 7 on the scale). The following table presents the average numerical ratings for specific qualities:

<u>1 on the scale</u>	<u>7 on the scale</u>	<u>Average rating Number</u>
Low in food value	High in food value	5.3
Not fattening	Fattening	4.7
Unnecessary food	Necessary food	4.2
Dull food	Exciting food	4.1
Low cost per serving	High cost per serving	2.4

(Question 31)

Price Awareness

Over half the homemakers (56 percent) who had used regular, uncooked rice in the year preceding the interview said they did not know the exact price they usually paid for the rice bought most often.

Proportionately more of the homemakers who had larger families, were younger, or were heavier rice users reported they knew the usual price of the rice they purchased most often. (Summary of questions 22 and 23)

Precooked and Prepared Rice

Homemakers were questioned about their use of precooked (instant and par-boiled or converted) and prepared (Spanish and fried) rice. More homemakers reported using regular, uncooked rice in the year and month prior to the interview than mentioned serving processed forms. Comparing the homemakers within each demographic group, we found use of regular, uncooked rice and instant rice varied with homemakers' characteristics, as shown below:

Proportionately more homemakers with the following characteristics had used

regular, uncooked rice--

...those with a lower income
...those with only a grammar school education
...and those who were heavier rice users.

instant rice--

...those with a higher income
...those with a college education
...and those who were lighter rice users.

(Summary of questions 1 and 5)

All homemakers who reported serving prepared rice in the preceding year were asked what they liked about prepared rice products. The features mentioned most often were: Easy to serve or prepare (46 percent); like the taste, flavor (40 percent); and quick to prepare (34 percent). One in 10 said they didn't care for prepared rice products. (Question 12)

Serving Patterns

The majority (66 percent) of homemakers who had served precooked or prepared rice in the previous year reported serving it about as often as 2 years before. Almost 2 in 10 were serving it more often at the time of the interview and 1 in 10, less often. Those serving it more often were more likely to be younger homemakers or heavier users of rice. (Question 14)

Change in eating habits (30 percent), quicker to prepare (22 percent), and didn't use it at all 2 years ago (20 percent) were the reasons given most often by homemakers who reported an increase in frequency of serving precooked or prepared rice. Homemakers who were serving it less frequently cited reasons such as: Smaller family now (20 percent) and family doesn't like rice (18 percent). (Question 15)

Fewer respondents had served parboiled or converted rice than had served instant rice during the previous month. (Summary of question 6) However, proportionately more respondents had served parboiled or converted rice more frequently than instant rice in this time period:

<u>Number of times served in past month</u>	<u>Parboiled or converted</u>	<u>Instant</u>
	-----Percent 1/-----	
1 or 2	49	61
3 - 5	32	27
6 or more	17	11

1/ Percentages do not add to 100 because 2 percent of the homemakers who had served parboiled rice and 1 percent who had served instant rice did not report the number of times each type had been served in the past month.

(Summary of Question 8)

Opinions About Cost Per Serving

About 5 in 10 homemakers said that parboiled rice and about 6 in 10 said that instant rice cost more per serving than regular, uncooked rice. About 6 in 10 said purchasing prepared Spanish and fried rice cost more per serving than if they made these products from regular, uncooked rice plus other necessary ingredients. Around 3 in 10 said they could not compare the costs. The remainder indicated that the costs of the precooked or prepared rice were the same or less than the cost of regular, uncooked rice or the cost of Spanish and fried rice made by them from the necessary ingredients. (Questions 32 and 33, and Question 34)

Wild Rice and Brown Rice

Only 1 in 10 homemakers reported serving wild rice in the year prior to the interview, and slightly fewer said brown rice. Use of both types of rice was notably higher in the Western region, among those with higher incomes, and among those with college educations. (Summary of questions 35 and 40)

Even among those who had used wild rice in the past year, almost 6 in 10 (56 percent) had used it only once or twice and around 2 in 10 (23 percent) had used it three to five times. Only 2 in 10 reported six or more times. About 2 in 10 homemakers (21 percent) who had served any wild rice in the prior year also had served it in the month preceding the interview. About the same proportion of brown rice users (19 percent) had served it in the previous month. (Tabulations not shown)

Like the flavor; serve it with wild game, duck, or cornish hens; like it for a change of taste--with chicken or turkey; or serve it for company were the reasons most frequently given by homemakers for using wild rice in the past year. About 2 in 10 homemakers who had used wild rice in the previous year declared they had tried it but wouldn't serve it again, mainly because it was too expensive or they didn't like the taste. (Tabulations not shown)

Among the homemakers who had used wild rice in the previous year, 4 in 10 said they served it exclusively at dinner for guests, about the same number said only at family meals, and the balance served it for both guests and family meals. (Tabulation not shown)

WHEAT

Bread

Serving and Purchase Patterns

Homemakers were asked about their use of white and other breads made from wheat, such as bread made from whole wheat or cracked wheat.

Only 1 percent of all homemakers had not served any bread made from wheat during the year preceding the interview. Almost all homemakers (97 percent) had served bread made from wheat during the 7 days preceding the interview. Only eat bread made from other grains, on a reducing or restricted diet, just don't eat bread, and bread is too fattening were some of the reasons given by the rest for not serving bread made from wheat during this 7-day period. (Tabulations not shown)

Homemakers were classified by the amount of white bread they served in an average week:

Light users--less than two loaves (29 percent)

Medium users--two - four loaves (44 percent)

Heavy users--five or more loaves (26 percent)

Nonusers--none served (1 percent)

More of the homemakers from the smallest sized families (one or two members) were classified as light users of white bread, more of the homemakers from the three- or four-member families were medium users, and more of the homemakers from families with five or more members were heavy users. Homemakers from the lower income group were almost equally divided between the light (39 percent) and medium (40 percent) user classification, and more of the middle and upper income groups fell into the medium user classification. More homemakers between ages 35 and 49 were classified as heavy users of white bread than were the younger or older homemakers. (Summary of questions 4, 5, 6, and 7 in the wheat section)

Homemakers said that in an average week they usually served white bread most frequently at breakfast (88 percent), followed by lunch at home (69 percent) and dinner (68 percent), packed lunches (43 percent), and between-meal snacks (37 percent). About 3 in 10 homemakers who used white bread for breakfast, packed lunches, or dinner said 50 percent or more of the white bread used in an average week was used for each of these meals. (Summary of questions 8 and 10; Summary of questions 9 and 11)

Questioned about the type of wheat bread bought most, the majority of the homemakers (89 percent) answered white bread. Although a majority of the respondents from each of the regions (Northeast, North Central, South, and West)

indicated that white bread was the type bought most, a smaller percentage of homemakers from the Western region (75 percent vs. 90-94 percent) said white bread. (Question 14)

More than 8 in 10 homemakers (83 percent) said they knew the price they paid for the bread they bought most often. (Tabulation not shown) In comparing the number of times they served bread at the time of the interview and 2 years before, more than 7 in 10 homemakers (72 percent) said they were serving it with about the same frequency. About equal proportions were currently serving it more frequently (13 percent) and less frequently (14 percent). (Question 29)

When comparing the amount of bread used currently and 2 years previously, 6 in 10 homemakers said their families ate about the same amount, more than 2 in 10 (22 percent) said they were currently using more bread, and 17 percent said less. (Question 33)

The reasons given most often by homemakers for both more frequent serving and using more bread were: Children are older and eat more, make more sandwiches, and family is larger.

The leading reasons for using less bread or serving it less frequently included dieting or weight watching and a decrease in the size of the family. (Question 30 and Question 34)

Qualities Important in Selecting White Bread

Homemakers were asked to choose from a list of qualities those they felt were important to them in selecting a loaf of white bread. Freshness was chosen most often (79 percent), followed by softness (62 percent) and flavor (61 percent).

A large size loaf was indicated as important by 6 in 10 heavier users of white bread and by approximately the same proportion of respondents with five or more persons in their families. Price also was an important factor to larger families and to those classified as medium and heavy bread users. (Question 95)

Opinions on Selected Characteristics of White Bread

All homemakers were given a card listing specific qualities used to describe white bread. A seven-point scale was used to indicate their opinions. Negative and positive qualities were not always indicated by the same numbers to avoid positional bias. For example, "low in food value" was 1 and "high in food value" was 7; whereas, "inexpensive per serving" was 1 and "expensive per serving" was 7 on the scale. The respondents were to report their opinion about white bread by indicating the number that was closest to how they felt. About 6 in 10 thought white bread was high in food value, rating it 6 or 7 on the scale. Although about 6 in 10 homemakers thought bread was fattening, about 7 in 10 felt it was a necessary food. Opinions were more divided, though generally favorable, on whether the cost per serving was expensive or inexpensive and whether white bread was a dull or exciting food. Only about 1 in 10 considered bread expensive per serving (rating it 6 or 7) or a dull

The following table presents the average numerical
lities;

<u>1 on the scale</u>	<u>7 on the scale</u>	<u>Average rating</u> <u>Number</u>
Low in food value	High in food value	5.8
Unnecessary food	Necessary food	5.8
Not fattening	Fattening	5.6
Dull food	Exciting food	4.5
Inexpensive per serving	Expensive per serving	3.1

Homemakers were asked why they rated white bread as they did on the not fattening (1 on the scale) to fattening (7 on the scale) qualities. More than 6 in 10 homemakers (62 percent) felt that white bread was fattening, rating it 6 or 7 on the scale--mainly because it contains starch or carbohydrates.

The relatively few homemakers (7 percent) who considered white bread not fattening (rating it 1 or 2) gave reasons such as: Bread is not fattening to them or their families, bread by itself is not fattening, and it is not fattening if used in moderation. (Question 96 and Question 97)

Frozen Bread Dough

Only one-third of the homemakers had ever used frozen bread dough. (Tabulation not shown) In general, reported use was infrequent--fewer than 3 in 10 homemakers who had ever used frozen bread dough had used it as frequently as once a month or more. (Question 48) Apparently, infrequent use was not due to any difficulty in finding frozen bread dough--about 9 in 10 homemakers who had ever used it reported there was no problem in finding it when wanted. (Tabulation not shown)

Homemakers who had ever used this product were asked to indicate what they liked and disliked about it. Specific complaints were mostly about poor baking results (45 percent): Crust is hard, breaks, peels off; fell after coming out of oven, and didn't rise properly like other breads. Other complaints included: Just don't like it (33 percent); forgot to take it out of freezer in time to be ready for dinner; and baking directions unreliable, takes much longer than stated.

About 6 in 10 homemakers who had ever used frozen bread dough stated they liked it because of the bread's taste or flavor--more specifically, the homemade taste, or the fresh flavor. Ease of preparation was also mentioned by about 3 in 10. (Questions 49 and 50)

Asked to make a choice, more than 6 in 10 homemakers (62 percent) who had ever used frozen bread dough said they preferred readymade bread. When asked why, 7 in 10 answered because of convenience: Ready to serve, faster, easier to use. For the one-third who preferred frozen bread dough, taste or flavor of the bread was mentioned most frequently. (Question 51 and Question 52)

About 3 in 10 homemakers (31 percent) who reported never using frozen bread dough said they had never heard of it. (Question 54)

Homemakers who had not used frozen bread dough but had heard of it gave reasons for nonuse such as: Prefer to make own bread products, lack of interest and easier to buy readymade bread. (Question 55)

Knowledge of Enriched Bread

Homemakers were asked to explain the meaning of "enriched" when it is printed on the wrapper of a loaf of bread. In general, homemakers were aware that something was added to the flour, but their knowledge of the nutrients used for enrichment of bread was extremely vague. (Question 93)

Rolls, Biscuits, Muffins

Serving Patterns

Half the homemakers reported serving purchased wheat rolls, biscuits, or muffins during the 7 days preceding the interview. About 8 in 10 homemakers said they had used these products during the previous year. (Questions 17 and 19) "Make my own," the most frequent reason mentioned, was given by about 2 in 10 homemakers who had not served them in the previous week. However, about 1 in 10 gave as their reason: Just didn't buy any this past week. (Question 18)

Among homemakers who had served purchased rolls, biscuits, or muffins in the preceding year, the largest number (about 3 in 10) said they served seven to 12 rolls in an average week, and about 2 in 10 said less than seven. However, about 3 in 10 homemakers from the South, about 2 in 10 from rural areas, and the same percentage from larger families said they served more than 30 rolls in an average week. (Summary of questions 20, 21, and 22)

Homemakers who had served rolls, biscuits, or muffins in the prior year were asked at which meals and occasions they usually served them in an average week. Dinner was indicated most frequently (76 percent); a much smaller proportion said breakfast (32 percent), lunch at home (20 percent), for between-meal snacks (6 percent), or packed lunches (3 percent). (Summary of questions 23 and 25)

Among homemakers who used rolls, biscuits, or muffins for dinner, about 6 in 10 (63 percent) reported serving them only for dinner. Fewer homemakers reported use of these products only for breakfast (30 percent), lunch at home (28 percent), or between-meal snacks (9 percent). (Summary of questions 24 and 26)

Around 6 in 10 homemakers (62 percent) said they served rolls, biscuits, or muffins about as often as they had 2 years earlier. But a larger proportion of homemakers reported serving them less often (17 percent) than reported more often (12 percent) at the time of interview. (Question 27)

The same relationship held for the amount of rolls, biscuits, or muffins used--63 percent served about the same amount, 18 percent a smaller amount, and 15 percent a larger amount. (Question 31)

Most frequent reason homemakers gave for serving these products more increased amounts was that their children were older. The most mentioned deterrents to use of these products were: Weight consci

ness, dieting, and a decrease in family size. (Question 28 and Question 32)

Serving Potatoes or Rice With Bread Products

The majority of homemakers said they serve both potatoes and bread, rolls biscuits, or muffins (69 percent); or both rice and these bread products (62 percent) at the same meal. Proportionately more homemakers from the Southern region, from rural communities, in lower income groups, with larger families, or with only a grammar school education said they served bread and potatoes or bread and rice at the same meal. (Question 35 and Question 37)

Half the homemakers who do not serve both bread and rice or bread and potatoes at the same meal said: Too much starch if both are served. Almost 1/2 in 10 (37 percent) who do not serve both rice and bread at the same meal said it is too filling. (Question 36 and Question 38)

Macaroni Products

Serving Patterns

About 4 in 10 homemakers said they had served spaghetti (43 percent) and macaroni (38 percent) within the 7 days preceding the interview; fewer homemakers (24 percent) said egg noodles. About 4 in 10 additional homemakers had served each of these products within the preceding year: macaroni--43 percent, spaghetti--42 percent, and egg noodles--37 percent. (Summary of questions 39 and 43)

Among homemakers who had used any of these products in the week before the interview, about 6 in 10 said they used the particular product once a week, on the average: macaroni--62 percent, spaghetti--61 percent, and egg noodles--58 percent. (Summary of questions 40, 41, and 42)

In the preceding year, all three of these products--particularly spaghetti--had been served more as a main dish than as a side dish:

	<u>Spaghetti</u>	<u>Macaroni</u>	<u>Egg noodles</u>
Served as:	----- <u>Percent</u> -----		
Main dish	86	59	54
Side dish	13	39	44
Both	1	2	2

(Question 44)

Opinions of Selected Characteristics

Homemakers rated macaroni products on selected characteristics, using a seven-point scale. Although almost 7 in 10 thought these products were fattening, rating them 6 or 7 on the scale, about 6 in 10 thought they were inexpensive per serving, rating them 1 or 2. More than half the homemakers considered all macaroni products to be about the same color, and about 3 in 10 felt they were high in food value, an exciting food, or a necessary food (rating them

6 or 7). The following table presents the average numerical ratings for these qualities:

<u>1 on the scale</u>	<u>7 on the scale</u>	<u>Average rating</u> <u>Number</u>
Not fattening	Fattening	5.8
Macaroni products vary greatly in color	Macaroni products are all about the same color	5.3
Low in food value	High in food value	4.8
Dull food	Exciting food	4.5
Unnecessary food	Necessary food	4.2
Inexpensive per serving	Expensive per serving	2.4

(Question 46)

Parboiled Wheat

Only 7 percent of the homemakers interviewed were familiar with parboiled wheat and only 2 percent had ever used it. More homemakers from the Western region and proportionately more who reported some college education knew about parboiled wheat. (Tabulations not shown)

Use of Flour for Baking

Eight in 10 homemakers reported using some kind of flour for baking during the preceding year. About three-quarters (73 percent) of the homemakers said they had used plain or cake flour for baking when asked specifically about use of these products. Only one-quarter had used self-rising flour.

Among the homemakers who had used some flour for baking in the prior year, about 1 in 10 said they had not used any plain or cake flour for this purpose--primarily because they used self-rising flour. About 7 in 10 had not used self-rising flour for baking. Their reasons for nonuse were varied, but unfamiliarity with self-rising flour and habit were mentioned most frequently.

About two-thirds of the homemakers who had used either of these flours for baking in the past year reported using it no more than once a week. About 2 in 10 said they used it three times or more per average week, and most of the others said two times. (Questions 63 through 73)

Use of Pancakes and Waffles

Homemakers were asked if they ever served pancakes. Frozen pancakes were not served, but potato pancakes were to be excluded. More than 8 in 10 reported serving pancakes. Of these homemakers, more than 6 in 10 served them once a week or more. Among homemakers who did not serve them, around 4 in 10 said they don't like them; almost all the others said they are too much trouble to make.

Homemakers were asked also if they ever served waffles--the frozen kind as well as those they make themselves. Almost half the homemakers (45 percent) said they served waffles. Of these homemakers, only 2 in 10 served them once a week or more. Among homemakers who never served waffles, half (49 percent) said they don't have a waffle iron; and almost one-fourth said they don't care for waffles. (Questions 74 through 79)

Use of Selected Prepared Mixes

Homemakers were questioned about their use and frequency of use of specific prepared mixes. Cake mix had been used by more homemakers than the other mixes; however, those who used pancake and waffle mix reported using it more frequently:

<u>Specific prepared mixes</u>	<u>Used in past year</u>	<u>Used in past month</u>	<u>Used 3 or more times in an average month</u>
	<u>-----Percent 1/-----</u>		
Cake	72	53	32
Pancake and waffle	63	49	48
Biscuit	40	24	31
Piecrust	21	12	20

1/ The percentages for use in the past year and past month are based on all the homemakers, whereas the percentages for used 3 or more times in an average month are based on the number who reported using each kind of mix. (Questions 80 through 85)

Cakes, Cookies, Pastries, Pies

Use in Any Form Other Than a Mix

Homemakers were asked also about their use and frequency of use of cakes, cookies, pastries, and pies in any form other than from a prepared mix. Cookies were used by more homemakers and were also served more frequently by users than these other products, as shown below:

<u>Products used in any form other than a mix</u>	<u>Used in past year</u>	<u>Used in past month</u>	<u>Used 3 or more times in an average month</u>
	<u>-----Percent 1/-----</u>		
Cookies	87	77	69
Cakes	79	60	47
Pies	75	57	42
Pastries	57	44	47

1/ The percentages for use in the past year and past month are based on all the homemakers, whereas the percentages for used 3 or more times in an average month are based on the number who reported using each product.

(Questions 86 through 91)

A comparison of the use and frequency of use of prepared cake mix and cake in any form other than from a mix indicated that the prepared cake mix was used by fewer homemakers and used less frequently in an average month. (Questions 80 through 91)

Percentage Bought, Made From Own Batter, or Made From Mixes

Homemakers who had served cakes, cookies, pastries, or pies in any form other than made from a prepared mix in the preceding month were asked what percentage of these were bought, made from their own batter, or made from mixes. More homemakers made pies "from scratch" than purchased them, and very few made them from a mix. A greater proportion of the pastries and cookies were purchased than were made from homemakers' own batter--very few were made from mixes. However, in the case of cakes, all three sources were reported frequently. (Question 92)

APPENDIX

SAMPLE DESIGN AND SAMPLING METHOD

The 3,137 persons interviewed in this survey were a representative sample of homemakers living in private households in the conterminous United States.

The sample was a self-weighting probability sample of dwelling units. The sampling design involved replicated sampling as described by Deming.^{1/} It contained 452 area sampling units in 207 counties throughout the United States and yielded an average of 9.2 dwelling units per sampling unit. Thus, 4,150 dwelling units were designated as part of the survey sample. Of this number, 280 were vacant and 87 had no homemaker, as defined for the purpose of this study. The remaining 3,783 comprised the eligible group of sample households. At least four attempts in urban areas and three in rural areas were made to complete interviews with homemakers who were not at home or were otherwise unavailable on the first visit to the household. Interviews were completed with 80 percent of the respondents in metropolitan areas having a population of more than 1 million; 83 percent in metropolitan areas having less than 1 million population and nonmetropolitan urban areas; and 87 percent in nonmetropolitan rural areas--making a total completion rate of 83 percent.

For each sampling unit, the interviewer was provided with a detailed map and instructions for listing the households included. Systematic random procedures were used to designate every "nth" household as that in which an interview was to be taken. No deviation from the specified procedures was permitted.

SAMPLING TOLERANCES

The extent to which sample results may differ from true figures for the population is related to a number of factors. Chief among these are the size of the sample and size of the reported survey percentages. The size of sampling fluctuations is also affected by the way in which primary sampling units are defined and selected and how widely scattered the sample is. The possible magnitudes of these chance sampling fluctuations are estimated on an approximate basis in the following table;

^{1/}Deming, W. Edward, Sample Design in Business Research (New York: John Wiley & Sons, Inc., 1960).

Table of tolerances 1/

For percentages around -----	Total sample	Size of subgroup sample				
	3,137	2,000	1,000	600	100	
	-----Percent-----					
50	2	3	4	5	12	
40 or 60	2	3	4	5	12	
30 or 70	2	3	4	5	11	
20 or 80	2	2	3	4	10	
10 or 90	1	2	2	3	7	

1/ Two standard errors: 95-percent confidence limits.

The chances are approximately 95 in 100 that the survey result does not vary, plus or minus, by more than the indicated number of percentage points from the result that would have been obtained had the same procedures been used to interview all homemakers in the population.

For example, 36 percent of all homemakers in our study said they had served instant rice in the preceding year. The chances are 95 in 100 that the error due to sampling fluctuations is not more than 2 percentage points.

TABLES FOR POTATO SECTION

Question 1: "How many times have you served white potatoes in any form, either fresh or processed, in the past month?" Asked of all homemakers.

	United States	
	total	Percent
Number of times white potatoes served in past month:		
1 to 3	7	
4 to 7	11	
8 to 11	12	
12 to 15	17	
16 to 19	8	
20 to 24	11	
25 to 29	10	
30 & over	20	
None served	4	
Number of cases	2,111	

Summary of question 2: Type of white potatoes served in the past month: Both fresh and processed (excluding potato chips); fresh only; processed only. Data reported only for homemakers who said they served white potatoes in any form in the past month.

	Cases Number	Served both fresh and processed potatoes	Served fresh potatoes only	Served processed potatoes only	
U. S. Total	2036	32	67	1	
Number of times white potatoes were served in any form in past month:					
1-3	157	8	83	9	
4-7	237	21	76	3

Question 10: "Why is it that you do not serve fresh white potatoes more often?" Asked only of women who serve fresh white potatoes one time or less in an average week.

	United States
	<u>Percent</u>
Number of cases: 382	
Weight conscious; potatoes are fattening; limit starches	2
Don't like potatoes that much; get tired of them	2
Serve other foods instead	3
Serve rice	11
Serve bread	4
Serve vegetables	4
Serve spaghetti; macaroni	2
Other foods	5
Don't cook that much anymore	
Too much trouble to fix	
Prefer instant/frozen potatoes because they are quicker and easier to prepare	
Health reasons (other than dieting)	
Takes too long to prepare; don't have time	
Not economical; doesn't pay to buy them	
Miscellaneous	
Not ascertained	

Question 11: "Please tell me why you serve fresh white potatoes?" Asked of all homemakers who served fresh white potatoes in the past year.¹

	United States total
	Percent
Family likes them	49
Nutritious food	23
High in food value	14
Contains starch	6
Contains vitamins	3
All other food elements	3
Don't like/don't buy/processed/instant/frozen potatoes	19
Fresh have better flavor	9
Family doesn't like the packaged	5
I don't like the packaged	4
Fresh are cheaper	3
All other reasons	4
Potatoes round out a meal; a staple	18
Like the taste of fresh white potatoes	15
Filling and satisfying food	11
Serve out of habit; used to using them	10
Can fix them in many ways	9
Go with almost anything; good side dish with any meat	8
An economical food	7
Easy to fix; convenient	5
Serve for variety	5
Serve because we grow them	2
Miscellaneous	6
Not ascertained	1
Number of cases	2,073

Question 52: "Why do you prefer (FROZEN BREAD DOUGH) (READY MADE BREAD)?" Asked only of those who prefer frozen bread dough.

Prefer frozen bread dough because:

Taste or flavor	70
Tastes more like homemade	34
Tastes better; better flavor	28
Tastes wonderful, tastier flavor	12
Other mentions of taste, flavor	2
Prefer hot, warm bread	18
Texture	17
Texture is good; not goeey, gummy; less doughy; finer, fine-grained	14
Other mentions of texture	3
Nice to have on hand; can keep it in freezer	15
Next best thing to homemade; more like homemade bread	14
Has wonderful smell while baking like it	13
Use it as a treat	9
Fresher; fresh	6
More economical; less expensive	6
Doesn't cost any more than other bread	3
If it weren't so expensive, I'd use it more	3
Not ascertained	2

Number of cases

224

Prefer ready made bread because:

Convenience	70
No preparation; ready to serve	35
Faster; less time-consuming	18
Easier to use; handy to serve	17
Handy and easy; convenient	16
Pre-sliced; no slicing needed	10
Other mentions of convenience	3
Has better taste, flavor	18
Better texture; even/finer/lighter texture	12
Better for lunches and sandwiches	9
Cheaper, less expensive; more for money; can't afford frozen	8
More consistent; know what we're getting	8
Like it better	8
Toasts better	4
Don't like frozen bread	4
Versatile; can't use frozen bread for all ways we use ready made; prefer for everyday use	3
Can control the amount we eat better; eat too much if hot bread is served	3
Variety; buy all different kinds so it is tasty; can get more/greater variety in ready made	2

With the exception of check-box material, office record information, and free-answer space, the questionnaires used for this study are reproduced below in entirety. Questions which appear on both the long and the short forms of the questionnaires are marked with asterisks. Responses to a few of the questions have not been reported because the data were not of value. Instructions to interviewers are in upper case letters. The cards used as visual aids are reproduced at the end of the questionnaires.

Good _____, I'm _____ from Chilton Research Services in Philadelphia. We are conducting a study among homemakers for the United States Department of Agriculture. We're getting opinions from homemakers across the country about their uses of different food products and you were selected as part of this cross-section. (NOW READ Q. 1 WITHOUT PAUSING)

POTATO SECTION

1. Now, I'd like to talk to you about white potatoes. How many times have you served potatoes in any form, either fresh or processed, in the past month? (HAND RESPONDENT CARD 4) These are examples of what we mean by processed potatoes. 2. How many of these _____ times did you serve fresh white potatoes and how many times did you serve some form of processed potatoes (excluding potato chips)? (IF "1" OR MORE TIMES FOR FRESH WHITE POTATOES, SKIP TO Q. 6. IF "0" TIMES FOR FRESH WHITE POTATOES CONTINUE) 3. When did you last serve fresh white potatoes?

(IF "WITHIN PAST YEAR BUT NOT PAST MONTH" IN Q. 3, ASK Q. 4 AND 4a. IF "MORE THAN 1 YEAR AGO" ASK Q. 4 THEN SKIP TO Q. 31) 4. Why is it that you have not served fresh white potatoes in the past month? 4a. How many times would you say you served fresh white potatoes in an average week?

(IF NEVER SERVED FRESH WHITE POTATOES IN Q. 3, ASK:) 5. Why is it that you have never served fresh white potatoes? (NOW SKIP TO Q. 31)

*6. Have you served fresh white potatoes within the past 7 days? (IF "NO", ASK:) *6a. How many times would you say you serve fresh white potatoes in an average week? (IF "YES" IN Q. 6, ASK:)

*7. How many times have you served fresh white potatoes in the past 7 days? *8. Would you say that (# IN Q. 7) is the number of times you serve fresh white potatoes in an average week? (IF "NO", ASK:) *9. How many times do you serve fresh white potatoes in an average week?

(IF POTATOES SERVED 1 TIME OR LESS IN Q.'s. 4a, 6a, 7 OR 9, ASK:) 10. Why is it that you do not serve fresh white potatoes more often?

(FOR EVERYONE WHO HAS SERVED FRESH WHITE POTATOES IN THE PAST YEAR, ASK:) 11. Please tell me why you serve fresh white potatoes?

12. Now thinking about how often you serve fresh white potatoes--that is, number of times, not the amount--are you serving them more often, less often or about as often as you did 2 years ago? (IF "MORE OFTEN" OF "LESS OFTEN", ASK:) 13. Why is it that you are serving fresh white potatoes (MORE OFTEN) (LESS OFTEN) than you did 2 years ago?

14. How many pounds of fresh white potatoes do you usually buy at one time? (HAND RESPONDENT CARD 1) 15. How frequently do you buy potatoes?

16. In season are you usually able to find the kind of fresh white potatoes you want? (IF "NO", ASK:) 17. What kind(s) is it that you can't usually buy? 18. Why is it that you can't usually buy (TYPES MENTIONED IN Q. 17)? (RECORD BY TYPE.)

(HAND RESPONDENT CARD 2) *19. Here is a list of different types of fresh white potatoes. Which of these types have you bought within the past year? (FOR EACH TYPE BOUGHT IN PAST YEAR, ASK:) *20. Have you bought any _____ in the past month? (IF ONLY ONE KIND BOUGHT IN PAST YEAR, INDICATE THAT ONE AS THE KIND LIKED BEST FOR Q. 21 AND WRITE 100% FOR Q. 22. IF MORE THAN ONE KIND BOUGHT IN PAST YEAR, ASK:) 21. Of the kinds you bought in the past year--that is, the (KINDS BOUGHT)--which kind do you like best? 22. Of all the fresh white potatoes you bought in the past year what percent would you say are (TYPES BOUGHT IN Q. 19)? 23. Why do you like (KIND LIKED BEST)?

24. In general, how would you rate the cooking quality of the fresh white potatoes you use (IF "FAIR" OR "POOR" ASK:) 25. Why do you rate them only (FAIR) (POOR)?

(HAND RESPONDENT CARD 3) 26 Here is a list of ways you can serve fresh white potatoes; of course, there are other ways. In what ways have you served potatoes in the past year? Any other ways?

27. In what ways have you served potatoes in the past month? Any other ways? (IF POTATOES SERVED IN ONE WAY ONLY IN PAST YEAR, WRITE 100% FOR THAT WAY FOR Q. 28) 28. Of all the fresh white potatoes you have served in the past year, what percent would you say are (TYPES SERVED IN Q. 26)?

29. In what season of the year do you serve fresh white potatoes? (IF MORE THAN ONE, ASK:) 29a In which season do you serve them most? (IF FRESH WHITE POTATOES SERVED MOST OFTEN IN ONE SEASON, ASK:) 30. Why do you serve fresh white potatoes more often in the (SEASON) than you do at other times of the year?

(ASK EVERYONE--HAND RESPONDENT CARD 4) 31. Here is a list of different processed white potato products that you can buy partially or completely prepared. Which of these have you bought in the past year? (IF NONE BOUGHT IN PAST YEAR, SKIP TO Q. 36) 32. Which have you bought in the past month? 33. Would you say that the (TYPE) you bought in the past year is higher or lower in cost per serving than if you prepared it yourself? 34. Has the use of processed and prepared potato products affected the total amount of potatoes used in your home? (IF YES, ASK:) 35. In what way?

(OF THOSE WHO HAVE EVER SERVED FRESH WHITE POTATOES, ASK:) 36. If you had planned to serve potatoes and discovered that you had run out of them, what would you do? 37. What (else) do you think you could serve in place of potatoes?

(IF ANY KIND OF FRESH OR PREPARED POTATOES EVER SERVED, ASK:) 38. When you serve potatoes at a meal, do you usually serve bread or rolls or other bread products? (IF "NO", ASK:) 39. Why is it that you usually do not serve bread or rolls when you serve potatoes?

40 Have you served any potato chips in the past month? (IF "NO" IN Q. 40, SKIP TO Q. 45) (HAND RESPONDENT CARD 5) 41. Which of these ways have you served potato chips in the past month? (IF SERVED IN ONE WAY ONLY, INDICATE THAT AS THE WAY SERVED MOST FREQUENTLY FOR Q. 42. IF SERVED IN MORE THAN ONE WAY, ASK:) 42. Which one way do you serve most frequently? 43. When you are buying potato chips, how important is the color of the potato chips to you--is it very important, somewhat important or not at all important? (IF "VERY IMPORTANT" OR "SOMEWHAT IMPORTANT", ASK:) 44. Why do you say that?

(ASK EVERYONE--HAND RESPONDENT CARD 6) *45. Here is a card listing qualities that might be used to describe fresh white potatoes. I'd like to know how you, yourself, feel about these things even if you don't use them. Your opinion may agree with the statement on the right or the statement on the left or it may fall somewhere in between. Please tell me the number that comes closest to how you feel.

(HAND RESPONDENT CARD 7) *46. Now, I'd like your opinion about different ways potatoes can be served. Here is a scale. As I mention the method of preparing potatoes show me on the scale how fattening you think potatoes are when they are prepared using your own recipe. If you think that method is very fattening select a number on the extreme right of the scale. If you think that potatoes prepared that way are not fattening at all, select a number on the extreme left. If your opinion falls somewhere between, you may select a number which best shows how you feel.

(HAND RESPONDENT CARD 8) *47. Now, I'd like your opinion about the flavor of fresh white potatoes and processed potatoes even though you may not have used them. Here is a scale just like the one you used First, how would you rate the flavor of fresh white potatoes? Instant mashed? Frozen french fried potatoes? Canned white potatoes?

RICE SECTION

As you may know there are different kinds of rice which you can buy today. There is regular, uncooked rice which has always been on the market. Then there is a parboiled rice, also known as converted rice, which comes partially cooked and doesn't take quite as long to cook. And there is "instant rice" which comes already cooked--all you have to do is bring some water to a boil and let the rice absorb the water. In addition to these products, you can also buy prepared foods made mainly with rice, such as frozen or canned foods.

1. Have you served rice in any form in the past year? (IF "NO" TO Q. 1, ASK:) 2. Why is it that you have not served any rice in the past year? (NOW SKIP TO Q. 31.) (IF "YES" Q. 1, ASK:) 3. Would you say you are using more rice, less rice or about the same amount of rice that you

used 2 years ago? 4. Please tell me the reasons you serve rice?

(HAND RESPONDENT CARD 1) *5. Here is a list of types of rice. Which of the listed types on this card have you served in the past year? Any others? Do not include wild rice or brown rice? (FOR EACH TYPE SERVED IN PAST YEAR, ASK:) *6. Have you served any _____ in any form in the past month? (IF "YES" IN Q. 6, ASK:) *7. How many times have you served rice in any form in the past month? *7a. Would you say that (# IN Q. 7) is the number of times you serve rice in an average month? (IF "NO" TO Q. 7a, ASK:) *7b. How many times do you serve rice in an average month? (IF MORE THAN ONE TYPE SERVED IN Q. 6, ASK:) *8. Of the (# IN Q. 7) times you served rice, about how many times did you serve (TYPES SERVED PAST MONTH)? (IF ONLY ONE TYPE SERVED IN PAST YEAR, INDICATE THAT TYPE LIKED BEST FOR Q. 9. IF MORE THAN ONE TYPE SERVED IN Q. 5, ASK:) 9. Of the different types of _____ rice you have used in the past year, which do you like best? 10. Why do you like (TYPE LIKED BEST) best?

(IF REGULAR, UNCOOKED RICE NOT SERVED IN PAST YEAR, Q. 5, ASK:) 11. Why is it that you have not served any regular, uncooked rice in the past year?

(IF ANY PREPARED RICE PRODUCTS WERE SERVED IN THE PAST YEAR, Q. 5, ASK:) 12. What do you like about the prepared rice products you serve?

(IF PREPARED RICE FOODS NOT USED IN THE PAST YEAR, Q. 5, ASK:) 13. Why is it that you haven't used prepared rice food products?

(IF ANY PRECOOKED OR PREPARED RICE PRODUCTS WERE SERVED IN THE PAST YEAR, Q. 5, ASK:) 14. Now, thinking about how often you serve precooked or prepared rice products--that is, number of times--not the amount, are you serving rice products more often, less often or about as often as you did 2 years ago? (IF "MORE OFTEN" OR "LESS OFTEN", ASK:) 15. Why is it that you are serving precooked or prepared rice (MORE OFTEN) (LESS OFTEN) than you did 2 years ago? (IF REGULAR, UNCOOKED RICE NOT SERVED IN PAST YEAR, SKIP TO Q. 24.)

IF SERVED REGULAR, UNCOOKED RICE IN PAST YEAR, Q. 5, ASK:) 16. On the average, about how many times in a month period do you serve regular, uncooked rice? (IF REGULAR, UNCOOKED RICE SERVED TIMES OR MORE SKIP TO Q. 18; IF 2 TIMES OR LESS, ASK:) 17. Why is it that you do not serve regular, uncooked rice more often?

8. Now, thinking about how often you serve regular, uncooked rice--that is, number of times, not the amount--are you serving regular uncooked rice more often, less often or about as often as you did 2 years ago? (IF "ABOUT AS OFTEN," SKIP TO Q. 20; IF "MORE OFTEN" OR "LESS OFTEN", ASK:) 9. Why is it that you are serving regular, uncooked rice (MORE OFTEN) (LESS OFTEN) than you did 2 years ago?

IF REGULAR, UNCOOKED RICE SERVED IN PAST MONTH, Q. 6, HAND RESPONDENT CARD 2 AND ASK:) 20. Here is a list of ways you can serve regular, uncooked rice. In what ways did you serve regular, uncooked rice in the past month? Any other ways? (IF SERVED ONLY ONE WAY IN PAST MONTH INDICATE THAT WAY AS SERVED MOST FOR Q. 21. IF SERVED IN MORE THAN ONE WAY, ASK:) 21. Which way do you serve most?

2. Do you know the exact price you pay for the regular, uncooked rice you buy most often? (IF "NO", SKIP TO Q. 24) 23. How much do you usually pay per pound for that rice?

4. Now considering all the types of rice available, do you prefer short, medium or long grain rice? (IF "DON'T KNOW", SKIP TO Q. 26) 25. Tell me why you prefer (TYPE PREFERRED)? (IF NO PREFERENCE, ASK:) Why is it you have no preference?

6. In which seasons of the year do you serve rice? (IF RICE SERVED IN MORE THAN ONE SEASON, ASK:) 26a. In which season do you serve rice most often? (IF RICE SERVED MOST OFTEN IN ONE SEASON IN Q. 26a ASK:) 27. Why do you serve rice most often in the (SEASON) than you do at other times of the year?

28. Thinking back 2 years ago, what kind of rice did you usually buy most often--regular, parboiled or converted, instant, or prepared? 29. What kind do you buy most often now? (IF KIND BOUGHT NOW IS DIFFERENT FROM KIND BOUGHT 2 YEARS AGO, ASK:) 30. Why is it that you used to buy (KIND BOUGHT 2 YEARS AGO) most often and now buy (KIND BOUGHT NOW) most often?

(ASK EVERYONE--HAND RESPONDENT CARD 3) *31. Here is a card listing qualities used to describe regular, uncooked rice. I'd like to know how you yourself feel about these things even though you may not use regular, uncooked rice. Your opinion may agree with the statement on the right or the statement on the left or it may fall somewhere in between. Please tell me the number that comes closest to how you feel.

32. Would you say that parboiled or converted rice costs more, less or about the same per serving as regular, uncooked rice? 33. Would you say that instant rice costs more, less or about the same as regular, uncooked rice? 34. Even though you may not have used it, would you say that prepared (SPANISH RICE) (FRIED RICE) is higher or lower in cost per serving than if you prepared it yourself using regular, uncooked rice and other necessary ingredients?

35. Have you used any wild rice in the past year? (IF "YES" ASK Q's 36 THRU 39) 36. How many times have you used wild rice in the past year? 37. Have you used any wild rice in the past month? 38. Why do you use wild rice? 39. On what occasion do you serve wild rice?

40. Have you used brown rice in the past year? (IF "YES", ASK:) 41. Have you used brown rice in the past month?

WHEAT SECTION

Now, I'd like to talk to you about white bread and other breads made from wheat such as whole wheat or cracked wheat. Do not include rye bread or pumpernickel since they are not made from wheat.

*1. Have you served any white bread or other breads made from wheat in the past 7 days? (IF "YES", SKIP TO Q. 5; IF "NO", ASK:) *2. Why is it that you have not served any white bread or other breads made from wheat in the past 7 days? *3. When did you last serve white bread or other breads made from wheat? (IF MORE THAN 1 YEAR AGO, SKIP TO Q. 17) *4. How much white bread do you use in an average week? (NOW SKIP TO Q. 10)

(IF "YES" TO Q. 1, ASK:) *5. How much white bread have you used in the past 7 days? *6. Would you say (AMOUNT IN Q. 5) is the amount you serve in an average week or not? (IF "YES", SKIP TO Q. 8; IF "NO", ASK:) *7. About how much white bread do you use in an average week?

(HAND RESPONDENT CARD 1) 8. Here is a card showing meals and occasions when you might use white bread. At which meals or occasions did you use white bread in the past 7 days? (IF WHITE BREAD SERVED AT MORE THAN 1 IN Q. 8, ASK:) 9. Of the white bread you used in the past 7 days about what percent did you use for (EACH OCCASION)? (NOW SKIP TO Q. 12)

(HAND RESPONDENT CARD 1) 10. Here is a card showing meals and occasions when you might use white bread. In an average week, at which meals or occasions do you usually serve white bread? (IF WHITE BREAD SERVED AT MORE THAN 1 IN Q. 10, ASK:) 11. Of the white bread you use in an average week about what percent do you use for (EACH OCCASION)?

12. What brand of bread do you buy most often? 13. What is the name of the store where you usually buy _____? Where is it located?

14. What type of bread do you buy most--white, whole wheat, cracked wheat or some other kind made from wheat? 15. Do you know the price you pay for the bread you buy most often? (IF "YES" TO Q. 15, ASK:) 16. How much do you usually pay for that bread?

(ASK EVERYONE) 17. In the past 7 days have you served any rolls, biscuits or muffins (made from wheat) which were purchased? Please don't include any corn muffins or bran muffins--only rolls, biscuits or muffins made from wheat? Don't include sweet rolls, biscuits or muffins made from mixes. (IF "YES", SKIP TO Q. 20; IF "NO", ASK:) 18. Why is it that you haven't served any rolls, biscuits or muffins in the past 7 days? Remember now we're talking about those which were purchased. (HAND RESPONDENT CARD 2) 19. When did you last serve rolls, biscuits or muffins? (IF "SERVED WITHIN PAST YEAR," SKIP TO Q. 22; IF "NOT SERVED WITHIN PAST YEAR," SKIP TO Q. 29)

(IF "YES" TO Q. 17, ASK:) 20. How many rolls, biscuits or muffins have you served in the past 7 days? (IF "NONE" SKIP TO Q. 22; OTHERWISE ASK:) 21. Would you say that (AMOUNT IN Q. 20) is the amount of rolls, biscuits or muffins you use in an average week or not? (IF "NO" TO Q. 21, ASK:) 22. How many rolls, biscuits or muffins do you use in an average week? (NOW SKIP TO Q. 25)

(IF "YES" TO Q. 21, HAND RESPONDENT CARD 1) 23. Here again is the card showing meals and occasions. At which meals did you use rolls, biscuits or muffins in the past 7 days? (IF SERVED AT MORE THAN 1 IN Q. 23, ASK:) 24. Of the rolls, biscuits or muffins you used in the past 7 days, about what percent did you use for (EACH OCCASION)? (NOW SKIP TO Q. 27)

(HAND RESPONDENT CARD 1) 25. Here again is the card showing meals and occasions. In an average week, at which meals or occasions do you use rolls, biscuits, or muffins? (IF SERVED AT MORE THAN 1 IN Q. 25, ASK:) 26. Of the rolls, biscuits or muffins you use in an average week, about what percent did you use for (EACH OCCASION)?

27. Now, thinking about the number of times you are serving rolls, biscuits or muffins, are you serving rolls, biscuits or muffins more often, less often or about as often as you did 2 years ago? (IF "ABOUT AS OFTEN," SKIP TO Q. 29; IF "MORE OFTEN" OR "LESS OFTEN", ASK:) 28. Why is it that you are serving rolls, biscuits or muffins (MORE OFTEN) (LESS OFTEN) than you did 2 years ago?

29. Thinking about the number of times you are serving bread, are you serving bread more often, less often or about as often as you did 2 years ago? (IF "ABOUT AS OFTEN," SKIP TO Q. 31; IF "MORE OFTEN" OR "LESS OFTEN," ASK:) 30. Why is it you are serving bread (MORE OFTEN) (LESS OFTEN) than you did 2 years ago?

31. Now, thinking about the amount of rolls, biscuits or muffins you are now using--that is the actual amount the family is eating, would you say that you are using more, less or about the same of rolls, biscuits or muffins than you did 2 years ago? (IF "ABOUT THE SAME," SKIP TO Q. 33; IF "MORE" OR "LESS," ASK:) 32. Why is it that you are now using (MORE) (LESS) rolls, biscuits or muffins than you did 2 years ago?

33. Thinking about the amount of bread you are now using--that is the actual amount the family is eating, would you say that you are using more, less or about the same amount of bread than you did 2 years ago? (IF "ABOUT THE SAME," SKIP TO Q. 35; IF "MORE" OR "LESS," ASK:) 34. Why is it that you are now using (MORE) (LESS) bread than you did 2 years ago?

35. If you serve potatoes at a meal, do you usually serve bread, rolls, biscuits or muffins? (IF "NO," ASK:) 36. Tell me why you don't usually serve bread or rolls when you serve potatoes?

37. If you serve rice at a meal, do you usually serve bread, rolls, biscuits or muffins? (IF "NO," ASK:) 38. Tell me why you don't usually serve bread or rolls when you serve rice?

Now, a few questions about spaghetti, macaroni and egg noodles: 39. In the past 7 days, have you served any spaghetti? Macaroni? Egg noodles? (FOR EACH PRODUCT SERVED, CONTINUE--IF PRODUCT NOT SERVED, SKIP TO Q. 43 FOR THAT PRODUCT) 40. How many times did you serve (PRODUCT) in the past 7 days? 41. Would you say that (# TIMES IN Q. 40) is the number of times you serve (PRODUCT) in an average week? (IF "NO" TO Q. 41, ASK:) 42. How many times do you serve (PRODUCT) in an average week? (NOW SKIP TO Q. 44) (IF "NONE" SERVED IN Q. 39, ASK:) 43. When did you last serve (PRODUCT)? (IF "MORE THAN 1 YEAR AGO" OR "NEVER," SKIP TO Q. 46; IF "LESS THAN 1 YEAR AGO," CONTINUE)

44. How do you usually serve (PRODUCT), as a main dish or as a side dish? 45. Why do you serve (PRODUCT) as a (MAIN DISH) (SIDE DISH)?

(ASK EVERYONE--HAND RESPONDENT CARD 3) 46. Here is a card listing qualities that might be used to describe macaroni products. Your opinion may agree with the statement on the right or the statement on the left or it may fall somewhere in between. Please pick the number that comes closest to how you feel.

I'd like to talk to you now about frozen bread dough--the kind that you buy frozen, but which you have to let thaw and rise before baking. 47. Have you ever used frozen bread dough? (ASK Q's. 48 THRU 53 ONLY IF "YES" TO Q. 47) (HAND RESPONDENT CARD 4) 48. How frequently do you use frozen bread dough? 49. What do you like about frozen bread dough? 50. What do you dislike about frozen bread dough? 51. Which do you prefer--the bread you make from frozen bread dough or the bread you usually buy ready made? 52. Why do you prefer (ANSWER IN Q. 51)? 53. Are you usually able to find frozen bread dough when you want it? (NOW SKIP TO Q. 56)

(IF "NO" TO Q. 47, ASK:) 54. Have you ever heard of frozen bread dough? (IF "YES" TO Q. 54, ASK:) 55. Why haven't you ever tried it?

(ASK EVERYONE) Now your comments about a product you probably don't get asked about every day. 56. Do you know what parboiled wheat is? Some people call it bulgar wheat or wheat pilaf. (PEE-Loff) (IF "NO", SKIP TO Q. 63) 57. Do you ever use parboiled wheat? (IF "NO", SKIP TO Q. 63) 58. How do you serve parboiled wheat--as a plain side dish, in casseroles, in soups or in some other way? (HAND RESPONDENT CARD 4) 59. How often do you serve parboiled wheat (METHOD SERVED)? 60. Do you usually buy your parboiled wheat at the store where you buy most of your groceries or at some other store? (IF "SOME OTHER STORE," ASK:) 61. Why is it that you don't buy parboiled wheat where you buy most of your groceries? 62. Are you usually able to find parboiled wheat when you want it--that is, does the store usually have it when you want it?

(ASK EVERYONE) Next, I'd like to talk to you about flour. 63. Have you used any flour for baking in the past year? (IF "NO" SKIP TO Q. 74; IF "YES", ASK:) 64. During the past year did you use any plain or cake flour for baking (not the mix)? (IF "NO", ASK:) 65. Why haven't you used any plain or cake flour for baking during the past year? (Where flour is a major ingredient). (NOW SKIP TO Q. 69) (IF "YES" TO Q. 64, ASK:) 66. How often did you use plain flour for baking in the past week? 67. Would you say that (# IN Q. 66) is the number of times you use plain flour for baking in an average week? (IF "NO", ASK:) 68. How many times in an average week do you use plain flour for baking?

69 During the past year did you use any self-rising flour for baking? (IF "NO", ASK:) 70. Why is it that you haven't used any self-rising flour for baking in the past year? (NOW SKIP TO Q. 74) (IF "YES" TO Q. 69, ASK:) 71. How often did you use self-rising flour for baking in the past week? 72. Would you say that (# IN Q. 71) is the number of times you use self-rising flour for baking in an average week? (IF "NO", ASK:) 73. How many times in an average week do you use self-rising flour for baking?

(ASK EVERYONE) Now . . . 74. Do you ever serve pancakes including the frozen kind? Don't include potato pancakes. (IF "YES" TO Q. 74, HAND RESPONDENT CARD 4 AND ASK:) 75. How often do you serve pancakes? (IF "NO" TO Q. 74 ASK:) 76. Why is it that you do not serve pancakes at all?

(ASK EVERYONE) 77. Do you ever serve waffles--that is, the frozen kind as well as those you make yourself? (IF "YES" TO Q. 77, HAND RESPONDENT CARD 4 AND ASK:) 78. How often do you serve waffles? (IF "NO" TO Q. 77, ASK:) 79. Why is it that you do not serve waffles at all?

80. During the past year did you use any of these prepared mixes or not: Biscuit mix, cake mix, pancake and waffle mix, piecrust mix? Any others? (ASK Q. 81 FOR EACH MIX USED IN THE PAST YEAR) 81. During the past month did you use (EACH MIX USED)? (IF NONE, SKIP TO Q. 85) (FOR EACH MIX USED PAST MONTH, ASK:) 82. How many times did you use (MIX) in the past month? 83. Would you say that (# TIMES) is the number of times you use (MIX) in an average month? (IF "NO" TO Q. 83, ASK:) 84. Well, during the past year, how many times did you use (MIX) in an average month? (NOW SKIP TO Q. 86) (FOR EACH MIX USED PAST YEAR BUT NOT PAST MONTH, ASK:) 85. During the past year, how many times did you use (MIX) in an average month?

86. During the past year, did you use any of these products in any form other than mix or not: Cakes, cookies, pastries, pies? Any others? (ASK Q. 87 FOR EACH PRODUCT SERVED IN THE PAST YEAR) 87. During the past month did you serve (PRODUCT)? (IF "NONE", SKIP TO Q. 91) (FOR EACH PRODUCT SERVED PAST MONTH, ASK:) 88. How many times did you serve (PRODUCT) in the past month? 89. Would you say that (# TIMES) is the number of times you use (PRODUCT) in an average month? (IF "NO" TO Q. 89, ASK:) 90. Well, during the past year, how many times did you use (PRODUCT) in an average month? (NOW SKIP TO Q. 92) (FOR EACH PRODUCT USED PAST YEAR BUT NOT PAST MONTH, ASK:) 91. During the past year, how many times did you use (PRODUCT) in an average month? 92. What percent of the (EACH PRODUCT SERVED PAST MONTH) that you served in the past month was bought from a grocer's or baker's shelf, freezer or refrigerator; what percent were baked using your own batter and what percent were from mixes?

(ASK EVERYONE) 93. If a friend asked you what the word "enriched" means when it is printed on the wrapper of a loaf of bread, how would you explain it? 94. Thinking only of prewrapped brands, would you say that all brands, most brands, or only some brands are enriched?

(HAND RESPONDENT CARD 5) 95. Here is a list of qualities which might be used to describe white bread. Which of these do you feel are important to you in selecting a loaf of white bread?

(HAND RESPONDENT CARD 6) *96. Here is a card listing qualities that might be used to describe white bread. Your opinion may agree with the statement on the right or the statement on the left or it may fall somewhere in between. Please pick the number that comes closest to how you feel.

(QUESTION 97 TO BE ASKED CONCERNING RESPONDENT'S RATING OF BREAD AS "NOT FATTENING" OR "FATTENING") 97. I see you rated bread (# CHOSEN IN SCALE) on the "not fattening"- "fattening" scale. Please tell me why.

CLASSIFICATION SECTION

Now, we're interested in a few things about you and your family so we can see whether there are differences of opinions in different kinds of families. 1. Please tell me the members of your family who live here with you, including yourself, in relation to the head of the family. Please give me the age of each person from oldest to youngest. (LIST IN RELATION TO HEAD, SUCH AS, "WIFE", "SON", ETC. DO NOT GIVE NAMES.) 2. Are you employed? 3. Are you the head of the household? 4. What kind of work (does head of household do) (do you do)? What do they do or make where (he) (you) work(s)? 5. What was the last grade of school you completed? 6. In which of the following age groups are you: Under 20, 20-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-over? 7. Are you married or single (including widowed or divorced)?

(HAND RESPONDENT INCOME CARD) 8. To get a good cross section, we must interview people in all income groups. Here is a series of broad groups. Please tell me, by number, in which of these groups the total yearly income, before income taxes, of this household falls. Please include income from all sources. Just read off the number.

(RECORD WHETHER RESPONDENT IS MALE OR FEMALE)

CARDS USED IN INTERVIEWS

POTATO SECTION

Card 1--Q. 15

More than once a week
Once a week--4 times a month
Three times a month
